AERATORS

Arbrux floating aerators are the perfect addition to any body of water to improve water quality. All models are available in 1/2, 1, 2 & 3 HP.

Pond aeration adds oxygen to pond water, reducing algae, discouraging water breeding insects such as mosquitoes, and eliminating odour problems usually associated with stagnant water. Arbrux aerators offer an economical and efficient means of keeping any pond crystal clear and healthy.

FOUNTAINS

Whether it is a small pond or a large lake, a beautiful water feature can be installed with exceptional ease. Each Arbrux fountain has a choice of 6 different spray patterns.

The Arbrux line of floating fountains includes 1/2, 1, 2, 3, 5, 7.5 & 10 HP models. These fountains provide a beautiful aesthetic display while aerating the water naturally.

DE-ICERS

Arbrux De-Icers have been proven reliable in harsh Canadian winters. They are inexpensive insurance to help prevent winter ice damage. The De-Icer's high speed propeller brings the warmer, deep water to the surface creating open water. Typically a 1/2 HP Arbrux Limited De-Icer will clear 8 feet in diameter for every foot of propeller depth. In most cases an Arbrux De-Icer placed at a 5 foot depth will keep a 40 foot circle of water ice-free during extremely cold temperatures.

**The Vertex Bottom Aeration Advantage**

Designed to be both efficient and cost effective, Vertex aeration systems can aerate up to an 18 acre lake with as little as 2/3hp! Very low monthly operation costs, low maintenance (self-cleaning diffusers), and no potentially dangerous electricity in the water.

Vertex bottom aeration systems create a vertical current using the rising force of millions of small bubbles to entrain the water column, "turning the lake over" and allowing oxygen to be absorbed at the lake's surface. By moving the lower-oxygen water up from the bottom and eliminating thermal stratification, oxygen levels throughout the water column are increased.

The Vertex aeration system consists of a small shore mounted air compressor (1/3hp - 1hp), feeding a configuration of self-cleaning flexible membrane diffusers. Positioned on the lake's bottom, each diffuser station produces millions of small 500 - 1000 micron sized bubbles, creating a slow moving current that entrains the entire water column providing aeration through surface contact.

**CoActive AirStations™ Benefits:**

- 5-Year "No Questions" Warranty.
- Self-cleaning membrane diffusers = less maintenance; no need to remove.
- More energy efficient = lower operating costs
- Self-weighted tubing = easier installation
- Lifetime rust warranty on QuietAir™ Cabinets

**Let Even-Spray Help Plan the Right Vertex Aeration System to Suit Your Needs!**
