## **NEW! ACELEPRYN-G**

### **\*ONE APPLICATION/FULL SEASON CONTROL\***

Acelepryn-G provides Turf Managers unmatched, season long grub control with a single preventative application. It is now available in a convenient and flexible granular formulation.

Acelepryn-G should be applied in early spring, once irrigation is up and running. The product will disperse with just 2-3 revolutions of a sprinkler.

Acelepryn-G can be applied with any professional turf spreader. It comes in a convenient 125 SGN making it a great product for use on greens and hard to reach areas.

Acelepryn-G comes in a very manageable 10 Kg bag.

# What seed should I use?

## Choosing the correct seed for the right application

Choosing the right seed for the correct application will give you the best chance for success.

For greens we have a large variety of different Bentgrasses. From the high density cultivars like T-1, 777 and Penn series to the Lower density Penncross we have what will meet your budget and your needs.

For your tees and surrounds we carry an excellent blend of 60% Perennial Ryegrass with 40% of a blend of 4 different cultivars of Kentucky Bluegrasses. This is a perfect mix giving you the colour and wear tolerance for those high play areas.

We also carry an excellent blend for fairways, which consists of a 65% blended Kentucky Bluegrass along with 25% Creeping Red Fescue and 10% Perennial Rye Grass for all different growing environments.

We even carry seed for all of the out of play areas.

# Bundle your Spring and Summer Fungicides and save on your Final Fall Spray

## Fall Fungicides: It is never too soon to start thinking of them.

With Iprodione being taken off the market a handful of products have also been removed from the shelves. We are confident in letting you know that Instrata and Instrata II are not going anywhere any time soon.

For high play areas, such as greens, Instrata is still the gold standard. For larger areas such as fairways, tees and collars Instrata II is your go to.

Instrata controls snow mould with the active ingredients chlorothalonil, fludioxonil and propiconazole in a proprietary formulation created by Syngenta. The combination of active ingredients provides reliable and consistent control of pink and grey snow mould throughout the winter months.

Instrata® II combines the forces of two powerful active ingredients, Solatenol™ and fludioxinil. Solatenol assimilates into the plants via translaminar movement, strongly binding to the plant's cuticular wax, and slowly penetrating into the tissue. Solatenol also exhibits upward movement within grass plants, giving protection from snow mould from the inside out throughout the winter season. Instrata II couples solatenol with fludioxinil, a protectant, contact fungicide which inhibits fungal spore germination and stops mycelial growth. It is the same active ingredient contained in Medallion® fungicide. Instrata® II tightly binds to the leaf providing long-lasting control of snow mould over the winter months.
