EVERGREEN TARPS

EARLY INCENTIVE PROGRAM WITH EXTENDED TERMS

Evergreen Turf Covers have been the industry standard protecting turf for over 35 years.

All Evergreen covers have the “Smart Edge” no fray technology along with the unique silver weave and lace coating, that reflects 25% more heat back to the turf. They can be used for over winter protection, overseeding or new construction projects.

All Evergreen covers include staples and storage bag. They are available in 6 standard sizes and can also be custom sized to meet a specific need.

Until February 15th, 2021 *Even-Spray* is offering early incentives and summer terms on all tarps.

Book your tarps now and maximize your savings

EARLY GREEN TOPDRESSING SAND

**HERE TODAY. HERE
TOMORROW !!!**

The magic of
EVERGREEN

EARLY GREEN TOPDRESSING SAND

Hutcheson Sand & Mixes, together with Penn State University have introduced Early Green Topdressing Sand to the Canadian turf grass industry.

- * Raises soil and turf temperatures
- * Alleviates desiccation and Winterkill
- * Expedites growth and green up
- * Effective in melting snow and ice
- * Early Green is not a fertilizer, no risk of fertilizer burn

Early Green is available from *Even-Spray & Chemicals*
204-237-9095

Here Today. Here Tomorrow!!!

Fall Fungicides: It is never too soon to start thinking of them.

With Iprodione being taken off the market a handful of products have also been removed from the shelves. We are confident in letting you know that Instrata and Instrata II are not going anywhere any time soon.

For high play areas, such as greens Instrata is still the gold standard. For larger areas such as fairways, tees and collars Instrata II is your go to.

Instrata controls snow mould with the active ingredients chlorothalonil, fludioxonil and propiconazole in a proprietary formulation created by Syngenta. The combination of active ingredients provides reliable and consistent control of pink and grey snow mould throughout the winter months.

Instrata® II combines the forces of two powerful active ingredients, Solatenol™ and fludioxinil. Solatenol assimilates into the plants via translaminar movement strongly binding to the plant's cuticular wax, and slowly penetrating into the tissue. Solatenol also exhibits upward movement within grass plants, giving protection from snow mould from the inside out throughout the winter season. Instrata II couples solatenol with fludioxinil, a protectant contact fungicide which inhibits fungal spore germination and stops mycelial growth. It is the same active ingredient contained in Medallion® fungicide. Instrata® II tightly binds to the leaf providing long-lasting control of snow mould over the winter months.

****Available for Fall
2021****
